

# Certificate of Analysis

**Sprague-Dawley (SD) Rat Adipose-derived  
Mesenchymal Stem Cells**

Catalog No. RASMD-01001  
Lot Number: 140630J31

Cryopreservation Date: 2014-06-30  
Passage Number: 2

---

## Viability

Cells are assayed for viability post-thaw using vital staining assay with trypan blue.  
Specification: Cells should exhibit  $\geq 80\%$  viability.

## Sterility

Bacterial and Fungal Contamination: Samples are inoculated and cultured in blood agar plate, thioglycolate broth, trypticase soy broth and sabouraud dextrose agar.  
Specification: No growth must be observed.

Mycoplasma: Samples are tested for mycoplasma contamination using a PCR-based assay and direct culture.  
Specification: Results must be negative.

Endotoxin: Samples are tested for endotoxin contamination with LAL test.  
Specification: Results must show  $\leq 25\text{EU/ml}$ .

## Purity

Cells are assayed for purity using flow cytometric analysis of cell surface antigen expression after cryopreservation. Cells are immunofluorescently stained with fluorochrome-conjugated antibodies specific to cell surface antigens CD29, CD34, CD44, CD45, CD90 and CD11b.  
Specification: Cells must show  $\geq 70\%$  positivity for expression of cell surface antigens CD29, CD44 and CD90. Cells must show  $\leq 5\%$  positivity for expression of cell surface antigens CD34, CD45 and CD11b.

## Proliferation Ability

The cells are characterized by their ability to proliferate in culture with an attached well-spread morphology for  $\geq 5$  passages, and  $\leq 5\%$  cells exhibit spontaneous differentiation in each passage.

## Differentiation Ability

Cells are assayed after cryopreservation for their ability of tri-lineage differentiation. Cells must be able to differentiate to osteocytes, adipocytes and chondrocytes when cultured in the appropriate differentiation media.

**Results:**

All specifications have been met.
